Oracle WMS Cloud Health Check

Ensure your Oracle WMS Cloud and Oracle Integration Cloud (OIC) environments are running at peak performance and delivering the full value of your investment.

Our health check identifies opportunities to:

- Optimize system configuration and unlock unused capabilities
- Improve warehouse workflows and operational efficiency
- Strengthen ERP–WMS integrations for reliability and performance

Outcome: A clear, prioritized roadmap to improve operations, integrations, and overall system value.

ENPHASE

Enphase Energy – Distribution:

Identified process and configuration improvements that reduced manual handling, improved inventory visibility, and strengthened warehouse support for production operations.

ODL

ODL – Manufacturing / Distribution:

Uncovered workflow and integration enhancements that increased distribution efficiency, improved inventory accuracy, and expanded utilization of Oracle WMS capabilities.

Key health check **activities & deliverables**:

1. Getting started

- **Preliminary system assessment**: Review current configuration of Oracle WMS Cloud prior to on-site engagement.
- **Operational walkthrough**: Conduct warehouse tour to observe workflows and understand current operational challenges.

2. Process & system review

- **Process workshops**: Facilitate structured sessions to review business processes, pain points, and operational objectives.
- **Gap analysis**: Evaluate current processes against Oracle WMS Cloud capabilities and warehousing best practices.

3. Identify challenges & opportunities

- **Opportunity identification & prioritization**: Categorize and rank improvement opportunities based on value and effort.
- **Constraint Analysis**: Assess dependencies and limitations that may limit optimization.

4. Roadmap readout

Prioritized recommendations: Deliver a clear, value-based improvement roadmap outlining key initiatives, business impact, and critical dependencies.

Tangible Results

Findings presentation
Conduct an executive briefing which presents a summary of challenges, opportunities and recommended priorities

Written health check report
Deliver a detailed health check report with a summary of findings, recommendations and recommended next steps

Roadmap
Provide a formal execution plan outlining prioritized recommendations and key dependencies required to drive operational improvement and system optimization.

Cost savings
Improvements lead to reduction in inventory loss, improvements to labor efficiency and reduction in standing inventory

Increased efficiency
Optimization of labor and space is a key outcome of successful WMS deployments

Improved user adoption
Enables further process improvement
