

FlexiPro Data Operations

Self-service SQL over Oracle Fusion Cloud, plus scheduled extraction into your own database — no report requests, no developer tools, no database client.

PRODUCT DATASHEET	
Focus	SQL + Sync
Source	Fusion Cloud
Delivery	Browser

SQL Workbench

QUERY FUSION DIRECTLY

Write, run, save and share SQL directly against Oracle Fusion Cloud. Results return in seconds — **no direct database access required** and **SELECT only**: DML and DDL are rejected before they reach Fusion.

EDITOR

Write & run

SQL editor with autocomplete and syntax highlighting; up to 10,000 rows per query, paginated.

SCHEMA

Live schema browser

Browse tables, views and columns from the connected instance; insert any object with one click.

LIBRARY

Shared SQL repository

A team library of saved queries, shared or private, pre-loaded with working samples.

AI

Ask & AI Fix

Ask in plain English, or let AI analyse a failed query with full Fusion context and suggest a fix.

DATA BOUNDARY AI features send only aggregated figures — **never raw records or credentials**. Connection passwords are encrypted in the Intellinum ATP and never returned to the browser.

Data Sync

FUSION → YOUR DATABASE

Schedule automated extractions that pull Fusion data into your Intellinum ATP database on an **hourly, daily or weekly** cadence, with full run history and monitoring — so downstream reporting, integrations and applications read from a local copy instead of hitting Fusion on every request.

Scheduled extraction

Point a saved query at a target table and set the cadence. Runs unattended from there.

Run history & monitoring

Every run logged with status, row counts and duration, so a failed pull is visible immediately.

Local, queryable copy

Data lands in Oracle Autonomous Database — available to any tool that can reach ATP.

NO REPORT BACKLOG

Analysts self-serve instead of queueing report requests with IT

LOWER FUSION LOAD

Repeat reads hit the local ATP copy, not the production instance

DOWNSTREAM REUSE

Any application, integration or dashboard can consume the data

Also included

SAME PLATFORM

- **Reconciliation Dashboard** — Fusion (ERP) on-hand against Oracle WMS Cloud, with variance by item, org, sub-inventory and lot, interface-error triage and guarded corrective actions.
- **Fusion Data Compare** — master and setup data diffed between two environments (Test vs Production) with a scorecard and AI summary for cutover sign-off.

Requirements

BEFORE YOU CONNECT

- **Fusion account with reporting access** — the standard reporting and data-model roles, provided during onboarding.
- **Connection details** — Fusion instance URL and credentials; WMS Cloud credentials if reconciling.
- **Network** — optional Location-Based Access allowlist; static-IP egress supported for locked-down instances.

FROM ORACLE TO OUTCOME

Start with one saved query and one scheduled sync.

Runs against your own Fusion credentials. Read-only by default; every write-back is admin-gated and preview-first.
