Intellinum

SOLUTION BRIEF

How Intellinum Helps Optimize Every Oracle Inventory Environment

The right Oracle inventory strategy starts with the operation, not the application. Intellinum helps you determine the right Oracle foundation for each facility, implement and optimize the underlying solution, and selectively extend frontline execution where additional capability creates measurable value.

How to **get the most from each** Oracle inventory environment

Oracle Fusion Cloud Inventory Management

BEST SUITED FOR

Operations with straightforward, predictable inventory requirements and limited warehouse complexity

COMMON EXECUTION OPPORTUNITIES

- Streamline transactions
- Reduce manual data capture
- Improve mobile execution
- Improve labeling
- Support site-specific workflows

Oracle Advanced Inventory Management

BEST SUITED FOR

Manufacturing plants and other operations that need more structured inventory and warehouse execution without the complexity of a full WMS

COMMON EXECUTION OPPORTUNITIES

- Improve task execution
- Improve scanning and data capture
- Streamline workflows
- Support labeling requirements
- Add customer-specific process logic

Oracle Warehouse Management Cloud

BEST SUITED FOR

High-volume or operationally complex environments where warehouse execution is a critical business capability

COMMON EXECUTION OPPORTUNITIES

- Increase execution efficiency
- Simplify complex frontline workflows
- Connect systems and data
- Support customer-specific operating requirements

How **FlexiPro™ extends and enhances** Oracle execution

Oracle Fusion Cloud Inventory Management

- Streamlined mobile workflows
- Barcode scanning and data capture
- Role-specific interfaces
- Labeling and printing
- Customer-specific extensions
- Business continuity where needed

Oracle Advanced Inventory Management

- Optimized mobile execution
- Faster scanning and data capture
- Labeling and printing
- Customer-specific validations and workflow logic
- Customer-specific extensions and integrations

Oracle Warehouse Management Cloud

- Streamlined high-volume execution
- Simplified WMS workflows
- Cross-application frontline workflows
- Specialized labeling
- Customer-specific extensions

Turn Oracle strategy into operational performance with Intellinum

We can help you assess your operational requirements, define the right processes, and determine where each application should fit across your network. From there, we can implement, integrate, and continuously optimize each environment around the way your operation actually works.

1. **Assess and architect**

   We assess your operational requirements, define the right processes, and determine how Oracle applications should be configured to fit your operational requirements.

2. **Implement and optimize**

   We configure Oracle applications to reduce unnecessary touches, manual decisions, workarounds, and workflow friction that can limit business value.

3. **Integrate and extend**

   We connect your Oracle inventory, manufacturing, and logistics applications with warehouse automation, equipment, business partners, and third-party applications to support and enhance your capabilities.

4. **Continuously improve**

   As volumes, facilities, and business requirements change, we help you adapt processes, integrations, and application capabilities to keep your environment aligned with your operational needs.

Extend your Oracle environment with FlexiPro™

FlexiPro™ can extend the Oracle platform when your specific execution requirements go beyond standard functionality.

Streamline mobile execution with FlexiPro Mobility™

Simplify mobile workflows, reduce operational friction, and improve scanning and data capture for frontline employees.

Support enterprise labeling requirements with FlexiPro Label™

Manage integrated labeling and printing requirements, including more complex customer, regulatory, or operational labeling needs.

Create customer-specific workflows and extensions with FlexiPro Studio™

Build tailored workflows, validations, external API calls/integrations, business logic, and other extensions for requirements that go beyond standard functionality.

Extend selectively where it creates value

Apply FlexiPro™ selectively where additional execution capability can improve productivity, throughput, accuracy, usability, or other measurable business outcomes.

Why Intellinum

We specialize in Oracle supply chain and logistics applications

Oracle supply chain execution is our core focus, with deep experience across Oracle Fusion Cloud Inventory Management, Oracle Advanced Inventory Management, and Oracle Warehouse Management Cloud.

We understand the full Oracle inventory landscape

We supported 50+ Oracle inventory go-lives in 2025 alone, nearly half of the Oracle Warehouse Management Cloud install base, and the first Oracle Advanced Inventory Management customer to go live globally. With more than 250 customers worldwide, we bring a unique perspective across the full Oracle inventory landscape.

Oracle implementation expertise + purpose-built technology

We assess, design, implement, integrate, optimize, and support Oracle environments, and leverage FlexiPro™ where additional capability or simplified workflows create value.

We right-size the solution to the operation

Rather than assume your facility needs the most complex platform, we start with your operational requirements and recommend the combination of Oracle capabilities and targeted extensions that can deliver the best business outcome.

We help you evolve over time

As your business grows and operational requirements change, we help you optimize your Oracle environment to improve performance, usability, scalability, and operational simplicity.

We stay focused on measurable value

We ground our recommendations in measurable business outcomes, including throughput, labor productivity, service levels, scalability, and cost.

LET'S CONNECT

Contact us for an Oracle Inventory value assessment to help you:

- **Identify** where each Oracle inventory application best fits across your organization
- **Uncover** process, integration, and execution opportunities that can improve performance
- **Determine** where native Oracle capabilities are sufficient and where targeted extensions can create measurable value
- **Prioritize** improvements based on business impact
- **Define** a practical roadmap for implementation, optimization, and extension
